

Beet and Cane Sustainability Observatory: PECEGE (Brazil) will collaborate in the initiative

Following a series of exchanges, PECEGE and ARTB have agreed to initiate a collaborative work which will strengthen the development of a Beet and Cane Sustainability Observatory.

Through the use of an annual questionnaire, the Brazilian sugarcane will gradually enter the field of analysis of this project and complement the preliminary results obtained on a set of 13 environmental sustainability indicators developed, in conjunction with a scientific committee, throughout the second half of 2021.

PECEGE

Pecege Projectos are a multidisciplinary team of PECEGE and, since 2007, have worked in the presentation and survey of production costs and technical indicators for sugarcane, sugar, ethanol, and bioelectricity, contributing to the Brazilian agribusiness market and the world.

Pecege Projectos is specialized in the capture of market analysis and projections, comparative analysis, primary data collection, cost and price and others technical data survey.

Additional partnerships should follow as ARTB is in contact with other countries that wish to join the initiative and strengthen the foundations of this Observatory. To this end, ARTB has created, in collaboration with AgroSolutions, a set of indicator sheets which will soon be available in English.
